The TRUE Restoration Truck

Imagine an Emergency Response Water Truck that actually

was designed for RESTORERS! A truck that could hold all the equipment, tools, and consumables you need and store them in specific locations that were easily accessible to your technicians to work efficiently and stay on task!

CleanSource and the NSN Network have made available this unique and custom setup for you!

Truck Details:

2017 Chevy 4500 14ft Cutaway

The truck chassis has more than enough payload to handle a truck full of equipment, truckmount, and water tanks. 6.0L, 159"WB, T/C, Tilt & Cruise, 14,200lb GVW,

Supreme Custom Box

The custom box is designed with ideal storage and an efficient and organized layout in mind. It includes a lower profile height, translucent roof for lighting, five outside storage cabinets, airmover racks, storage closet, cab access door, overhead compartment, dehumidifier storage, and tie-down track system for securing equipment in place. The box also features dome lighting, rear and passenger side exterior lights, and large side door for access or truckmount

setup. The box truck is customized with rugged and slip resistant flooring.

Exclusive Package & Financing Program

We have an exclusive FLEET agreement with GM that allows us to package this set up together and offer you unbelievable savings. This package landed through at CleanSource via our GM dealer runs approximately \$46,500 (plus TTL) which includes the Chevy 4500 Chassis and Supreme Box. Our exclusive agreement with ALLY Bank (Previously GMAC Financing) can get you financed as low as 3.19% W.A.C. and minimal down. This is a true loan that allows you to build business credit and pay off early if desired unlike other leasing companies. ALLY can also build in all the equipment into your loan as well with no problem. This is not something you can achieve at a local dealer. We also have other financial institutions for contractors with credit that may be more challenging.

Adapts To Industry's New Low Profile Equipment

The True Restoration Truck, as seen pictured, allows for restorers to store standard sized equipment and also the new low profile airmovers and dehumidifiers that most manufacturers are moving to. Inside the box, two airmover racks can store up to 20 airmovers with more room to spare. The closet allows for storing airscrubbers and stacking low profile dehumidifiers. The storage rack above the side door allows for tool, ladder, sprayers, and more. As seen pictured, the shelf off the rear is the perfect width for storing up to 7 low profile Velo, Triad, or AirMax airmovers in a "bookshelf" style. The side compartments also allow for storing mini airmovers as well.

New Features on the 2017 TRUE Restoration Box Truck

The additions include exterior lighting, additional shelving, slip resistant flooring, enhanced door locks, overhead cabin storage, and additional tie down tracks for securing equipment.

NEW EXTERIOR LIGHTS
